

• All machines see owlcms using its 192.168 address

## One platform setup

- One main router
- WAN can connect to internet if needed.

#### For remote rooms

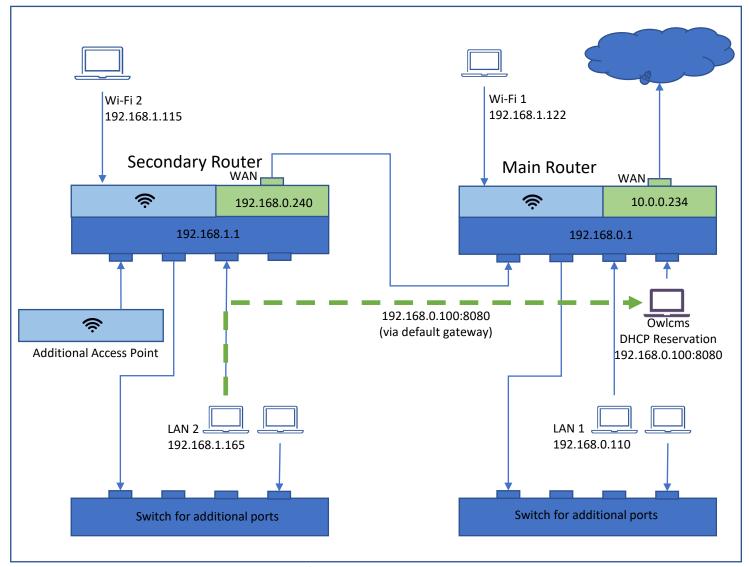

- Connect a switch to the router, or
- Connect an access point to the router, or
- Connect a router to the router (see next page)

- All machines see owlcms using its 192.168 address
- One secondary router per additional platform or room

## Distant room using routers

- You can connect one or more routers to a router
- On the secondary routers
  - For simplicity use different names for the two Wi-Fi networks
  - Ideally, change the Wi-Fi channel to be different

- All machines see owlcms using its 192.168 address
- One secondary router per additional platform or room

# Multiple platforms

- For simplicity,
  - connect the other platform routers directly to the main router
  - Use different Wi-Fi names
  - Use different channels
- You can connect one or more switches or access points to each router if you need more ports.

- All machines see owlcms using its 192.168 address
- One secondary router per additional platform
